

If the patient is placed in the system as an Inpatient without a Registration Status Inpatient order, this alert will be visible to anyone that opens the chart. It will alert every time the chart is opened until a Registration Status Inpatient order is placed.

New Registration Status Orders:

Click on Registration Status Inpatient: Reference Text will Display with explanation.

Click OK to proceed to the order

All Yellow fields must be filled in.

No ER residents are to enter the Registration Status Inpatient order!

If the Registration Status Inpatient order has not been cosigned by the appropriate physician and the patient is being discharged, this alert will fire when the Discharge Patient order is entered.

This is a hard stop for the Discharge Patient order. The discharging physician is to:

- 1) Sign the Registration order if he is the physician indicated in the alert above
- 2) Contact the physician in the alert above to sign the order
- 3) Proxy into the message center inbox of the physician above and sign the Registration Status Order.

The system will not allow placement of the Discharge Patient order until the Registration Status Inpatient order has been cosigned.
