West Jefferson Cancer Program Earns National Accreditation
With Commendation from the Commission on Cancer
of the American College of Surgeons

(Marrero, LA - April 12, 2018) - The Commission on Cancer (CoC), a quality program of the American College of Surgeons (ACS) has granted Three-Year Accreditation with Commendation to the cancer program at West Jefferson Medical Center. To earn voluntary CoC accreditation, a cancer program must meet or exceed the CoC quality care standards, be evaluated every three years through a survey process, and maintain levels of excellence in the delivery of comprehensive patient-centered care. Three-Year Accreditation with Commendation is only awarded to a facility that exceeds standard requirements at the time of its triennial survey.

Because it is a CoC-accredited cancer center, West Jefferson takes a multidisciplinary approach to treating cancer as a complex group of diseases that requires consultation among surgeons, medical and radiation oncologists, diagnostic radiologists, pathologists, and other cancer specialists. This multidisciplinary partnership results in improved patient care.

“"The accreditation of our cancer program only confirms what we always set out to achieve; that is, providing quality care in a comforting and cost-effective manner," said Vanessa Batson, Director of Inpatient Oncology and Oncology Service Line for West Jefferson Medical Center. “Upholding our vision, West Jefferson Medical Center’s cancer care team strives to optimize the health of our community now and in the future. Our patients and families should not have to leave their community in search of cancer care, but rather have high quality, plentiful and up-to-date resources, along with genuine support available close to home.”
The CoC Accreditation Program provides the framework for West Jefferson to improve its quality of patient care through various cancer-related programs that focus on the full spectrum of cancer care including prevention, early diagnosis, cancer staging, optimal treatment, rehabilitation, life-long follow-up for recurrent disease, and end-of-life care. When patients receive care at a CoC facility, they also have access to information on clinical trials and new treatments, genetic counseling, and patient centered services including psycho-social support, a patient navigation process, and a survivorship care plan that documents the care each patient receives and seeks to improve cancer survivors’ quality of life.

Like all CoC-accredited facilities, West Jefferson maintains a cancer registry and contributes data to the National Cancer Data Base (NCDB), a joint program of the CoC and American Cancer Society. This nationwide oncology outcomes database is the largest clinical disease registry in the world. Data on all types of cancer are tracked and analyzed through the NCDB and used to explore trends in cancer care. CoC-accredited cancer centers, in turn, have access to information derived from this type of data analysis, which is used to create national, regional, and state benchmark reports. These reports help CoC facilities with their quality improvement efforts.

The American Cancer Society estimates that more than 1.7 million cases of cancer will be diagnosed in 2018. There are currently more than 1,500 CoC-accredited cancer programs in the U.S. and Puerto Rico. CoC-accredited facilities diagnose and/or treat more than 70 percent of all newly diagnosed cancer patients. When cancer patients choose to seek care locally at a CoC-accredited cancer center, they are gaining access to comprehensive, state-of-the-art cancer care close to home. The CoC provides the public with information on the resources, services, and cancer treatment experience for each CoC-accredited cancer program through the CoC Hospital Locator at https://www.facs.org/search/cancer-programs.

Established in 1922 by the American College of Surgeons, the CoC is a consortium of professional organizations dedicated to improving patient outcomes and quality of life for cancer patients through standard-setting, prevention, research, education, and the monitoring of comprehensive, quality care. Its membership includes Fellows of the American College of Surgeons. For more information, visit: www.facs.org/cancer
